List of features needed for the MVP + Breakdown of tasks

- User can either log in through Log-in Page by Creating an account or continue without logging in.
- Dashboard which includes options like Breaks, Current day, Events, etc.
- Screen which enables the users to customize the breaks and add the days/timings.
- Option to allow the users to enable/disable the alerts.
- A toast notification and alarm that reminds the user about the breaks.

Mapping between features and value(s) to be delivered by your app (justification)

Skip Option for Log In:
- If the users are not willing to create an account, still they can use the application to manage their day

Dashboard:
- It helps the users to navigate between options like Current Day, Breaks, and Daily Routine

Add/Edit Breaks:
- Help users to add or customize their breaks and manage their daily life

Toast Notification/Alarm:
- It reminds the users about their daily personal & professional events with a reminder/alert.

Happy Path for Prototype:
User Login → Click 'Breaks' on Dashboard → Click on any Break → Edit Break → After selecting the time & date, alarm will be set → Alarm/Notification will alert the user about the saved break at that particular time.
